REALIZATION OF AGRI-ENVIRONMENTAL PROGRAMME IN WARMIA AND MAZURY PROVINCE

Key words: agrienvironmental packages of the programme, payment quota

Summary

This paper presents the effects of agrienvironmental programmes in the Warmia and Mazury province. Studied data were taken from regional branch of the Agency for Agriculture Restructuring and Modernisation in Olsztyn, from Central Statistical Bureau and the Central Inspectorate of Trade Quality of Agricultural-Food Products. Within agrienvironmental programme in the years 2004-2006, farmers of the province were most interested in soil and water protection package (undertaken in 41 552.6 ha i.e. in 4.6% arable land) and in organic farming (153 336 ha, 1.2% agricultural lands). The analysis showed that changes in agrienvironmental programmes for the years 2007-2013 would result in better utilization of financial means. Realization of the agrienvironmental programmes needs current analysis of packages, but also of plant groups in particular packages. The support of promotion campaigns of ecological products, food processing and distribution is also necessary.
